TRINITY KITS

808 - 909 - LD2

For MPC

TRINITY KITS

808 - 909 - LD2

MPC V2.11 onwards

FORCE 3.2 onwards

(hardware / software including MPC Beats)

WELCOME to ...

F9 TRINITY KITS

This release contains very carefully produced kits sampled directly from original hardware TR808. Tr909 and and Linndrum drum machines - The holy trinity of 1980s drum machines.

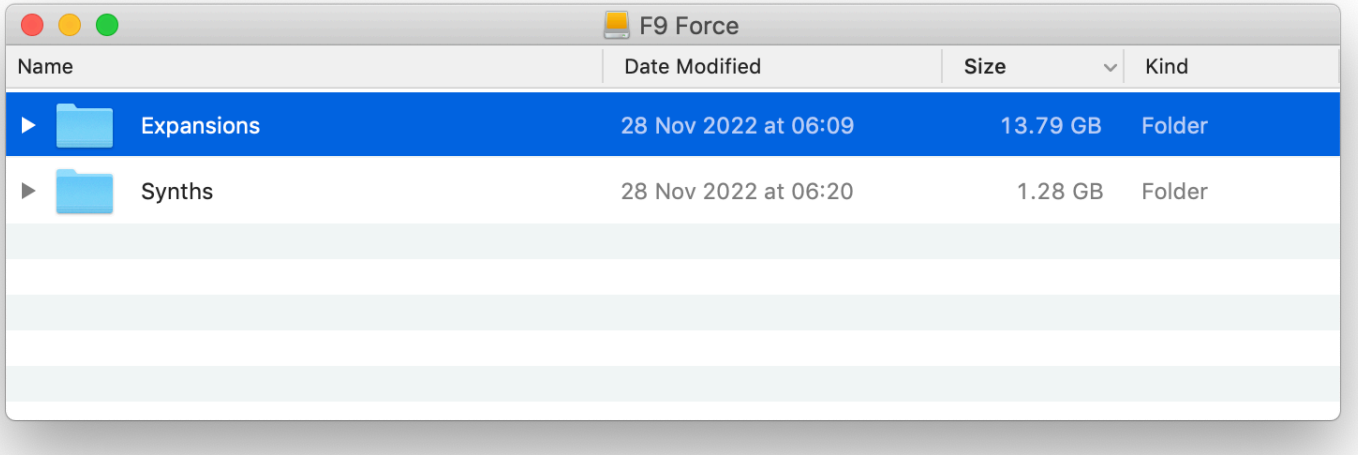

They were recorded via a Neve 1081 Preamp and EQ and compressed using a GML 8900 dynamics controller and then carefully post-processed for MPC V2.11 onwards.

We hope you love using this pack - these sounds are classic for a reason and we're very proud to present them for free to the production community.

Loading into your MPC / Force Manually

1- Unzip the expansion folder then copy the folder 'F9 Trinity Kits' onto the SD card, Internal SSD or USB Stick you wish to use with your device.

For the very best results, place it inside the 'Expansions' folder that may or may not be present on the drive you wish to use. If no such folder exists, you can simply create one named 'Expansions' .

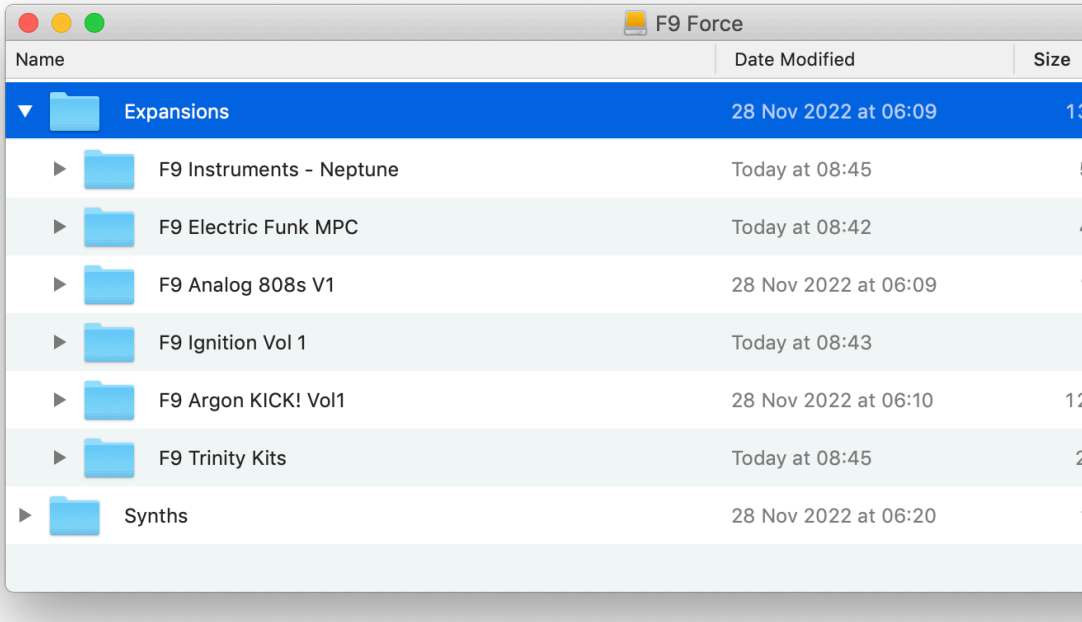

For internal SSD drives, you will need to mount the drive on your computer system using Controller / Computer mode. You can also access any SD cards inserted into your device using this method.

Please consult your MPC / Force User manual for details on how to set this up as the procedure may change between different operating systems.

Here's an example of several MPC expansions installed on a AKAI force

(it will be the same view for MPC users)

You can also install wherever you wish on your MPC drive, but please be aware you will have to manually navigate to that folder every time you wish to use the expansion

You may now insert the removable drive into your MPC / Force.

For internal SSDs or SD cards connected to your computer by your Akai device, please remove the drives from your computer's operating system as you would any removable device. It is then safe to swap the MPC / Force back over to standalone mode.

Accessing the packs in your MPC / Force

Access your MPC / Force's file browser and click on the 'expansion' tab. You can then scroll down to find this pack's artwork and click on it to access the files.

If you have not installed the F9 folder inside the expansions folder, you will need to navigate to the position on the drive you moved it to and open it manually.

For all file filtering options, please consult the most MPC / Force manuals as these option may change over time.

Force Kit Sequences

We have converted all MPC Kit sequence data from the MPC packs and converted them into MPC Patterns please load these into your Force sessions alongside the respective MPC kits.

They can be found in the sequence or clip area of the Force Browser.

All Kit Project Archive

We have included an MPC Project Archive (.xpa) file containing all the kits from this pack. This can be accessed from the 'Project' tab of your device's browser .

Your MPC will ask for a location for it to be unpacked to on the 1st run, we suggest using the same place as the archive itself for ease of use.

Larger projects

We always recommend you clear out any un-used instruments from your project and delete any samples not needed - all physical Akai devices have memory limits and it will also save you media space.
